

Fall Quarter, 2025

Climate & Health

Stellenbosch University, South Africa

*New engineering
study abroad program!*

*Learn more &
apply by February 1!*

Study the dramatic effects of a rapidly changing climate on ecological and human health in one of the most vulnerable and beautiful places on Earth. Explore the impacts of the climate emergency on resource availability, social equity, and national/international policy in Africa. Students will participate in field-based and project-based learning and attend lectures from experts on pressing environmental issues facing South African urban, rural, and village communities.
